EDUCATION

University of Michigan - Ann Arbor

Bachelor of Science in Computer Science, Minor in Entrepreneurship

Ann Arbor, MI

May 2028

WORK EXPERIENCE

Gametime United

Full-Stack Software Development Intern

Remote

June 2026 – Present

- Built React Native mobile feedback flows for AI chatbot, capturing ratings and contextual feedback across user responses.
- Developed FastAPI APIs with REST endpoints and Pydantic models to structure, validate, and route feedback data.
- Integrated DynamoDB and Braintrust to link feedback with chatbot sessions, evaluation traces, and response quality signals.
- Partnered with PM and engineering teams to define AI quality metrics, refine UI/UX, and strengthen API security.

Michigan Medicine - Department of Computational Medicine

Research Assistant – Genomic Agent Platform Development

Ann Arbor, MI

Jan 2026 – Present

- Built a React/TypeScript AI platform for researchers to query DNA binding predictions across 3B+ base-pair genome.
- Tested frontend user flows for queued interactions, file analysis, result visualization, loading states, and error states.
- Integrated REST API features supporting authentication, file handling, structured data retrieval, and session history.
- Debugged full-stack workflow issues and documented QA notes, test findings, and implementation comments.
- Collaborated with PhD researchers and engineers to validate features through feedback-driven development cycles.

Michigan Medicine - Department of Pediatrics

Research Assistant – Data Analysis & Behavioral Research

Ann Arbor, MI

Apr 2025 – Feb 2026

- Built Python automation pipelines to clean and validate behavioral datasets, reducing manual processing by 15+ hours/week.
- Implemented validation checks to prevent data loss, flag quality issues, and improve reliability for ML research.
- Analyzed 60+ pediatric recordings to extract structured behavioral metrics and support data-driven research decisions.
- Reviewed testing results to achieve 90%+ inter-rater reliability and improve Observer XT coding consistency.

PROJECTS

ACASO | React, TypeScript, Next.js, Customer Validation, Market Research

May 2026 – Present

- Co-founded an AI-native financial operations platform focused on simplifying invoice, contract, and payment review workflows.
- Designed frontend product flows for document upload, client records, discrepancy review, dashboard insights, and approval steps.
- Built landing page and product specs to communicate value proposition, core workflows, target users, and MVP requirements.
- Synthesized market research and customer validation to identify workflow pain points, prioritize features, and improve product.

SynthLab | React, FastAPI, Python, FAISS, SDV, RAG

Dec 2025 – Feb 2026

- Led full-stack development of a researcher-facing platform for secure synthetic clinical data generation and analysis workflows.
- Developed FastAPI routes for backend processing, file uploads, and REST API-driven model workflows across research data.
- Created validation workflows to verify generated datasets met realistic constraints before simulation and downstream modeling.
- Tested and debugged API-driven flows for document upload, querying, results display, and retrieval pipeline reliability.
- Optimized API calls and resolved defects to improve responsiveness, usability, and reliability across data-heavy workflows.

Euchre Game Engine | C++, OOP, Unit Testing

Sep 2025 – Dec 2025

- Built an object-oriented C++ card game engine modeling Euchre gameplay, round logic, player decisions, and game state.
- Wrote unit tests and test cases to validate game logic, edge cases, player actions, and expected outcomes.
- Reviewed test results and debugged failures to improve correctness, maintainability, and reliability through iterative fixes.
- Applied data structures and logic to evaluate game states, card ordering, player decisions, and rule-based outcomes.

BetBuddies | Experimentation, User Testing, Metrics, Documentation

Sep 2025 – Apr 2026

- Conducted 50+ user interviews to test assumptions around student motivation, sleep habits, and engagement loops.
- Designed A/B experiments to validate social features, tracking flows, and low-friction accountability mechanics.
- Documented test findings and user feedback to identify friction points, refine requirements, and guide product iterations.
- Defined success metrics for engagement, retention, and feature adoption across prototype testing cycles.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, SQL, HTML/CSS, Bash

Frameworks & APIs: React, React Native, FastAPI, Node.js, Express, REST APIs, Pydantic, TailwindCSS

Data & AI: Pandas, NumPy, FAISS, RAG, LLM APIs/SDKs, Plotly, D3.js, Data Validation

Tools & Infrastructure: Git/GitHub, Docker, Supabase/Postgres, MongoDB, DynamoDB, Braintrust, Google Cloud

Engineering Practices: Code Reviews, Cross-Functional Collaboration, System Performance, Agile/Scrum
